

TIME TO REDUCE

YOUR CARBON
FOOTPRINT...

GROUPE 5

IF THE CLIMATE WERE A BANK WE WOULD HAVE SAVED IT ALREADY

To do this, use carpooling and use plastic bottles.

We believe that ecology is an important thing for the
environment it must be taken care of .

REUSE REDUCE RECYCLE

"3R are all about
minimising the
amount of waste
we produce"

Let's recycle
together

Our responsibility

Recycling

Reuse

Repair

Metal Paper Plastic Glass

How to become more « éco-friendly » ?

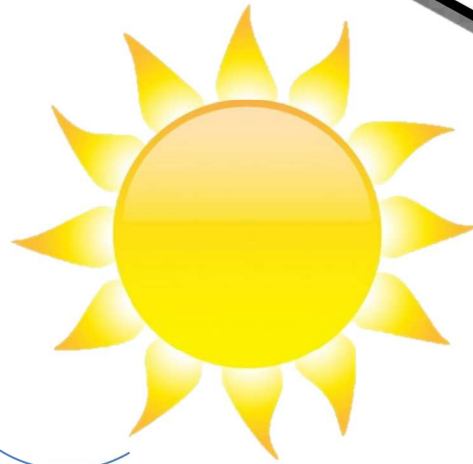

Rémi DEVIDAL, Elisée FAURE, Hugo PALOMBIERI, Jil-art CRATERE

How to reduce our plastic consumption ?

Instead of using plastic bottles better use reusable water gourd!!!!

How can we recharge our phone while consuming little energy?

The high school decided to install posts to charge phones, which create electric energy thanks to solar panels placed above the post!!!!

How to come to school more "cleanly"?

It is better to use public transport or come by bike or scooter for example or use car-polling!!!!

How to recycle in high school?

In the school in a yellow bin (for any recyclable material) and green bins are installed and reuse the "wasted" papers as a draft!

Sustainable development

1: Use reusable water bottles and avoid buying plastic bottles in quantity.

3: Do not use electricity unnecessarily, turn off the light when you change rooms and unplug certain appliances which are tin because they consume even when switched off. Likewise for water, close the coil well when not in use.

2: Use reusable bags to go to school instead of taking a new bag each time.

4: Obviously you have to know how to sort your waste, such as everything that is cardboard in the recycling bin.

Actions to be eco friendly.

. First of all use carpooling, public transport, bicycles or on foot.

let's

emitting co2 !!!

. Then we have to recycle. It also means we must not waste so avoid :

- do not print emails**
- do not send letters**
- do not use plastic bottles**
- do not use disposable cups**

. And finally use renewable energies.

REDUCE YOUR ENERGY CONSUMPTION.

HELP US SAVE EARTH.

**CHANGE YOUR LIFESTYLE. ADOPT A
SUSTAINABLE LIFESTYLE**

Take ecological action today.

How to fight against pollution

To stop polluting we should: sort our waste correctly; avoid disposable products; we could also use recyclable packaging to pollute less.

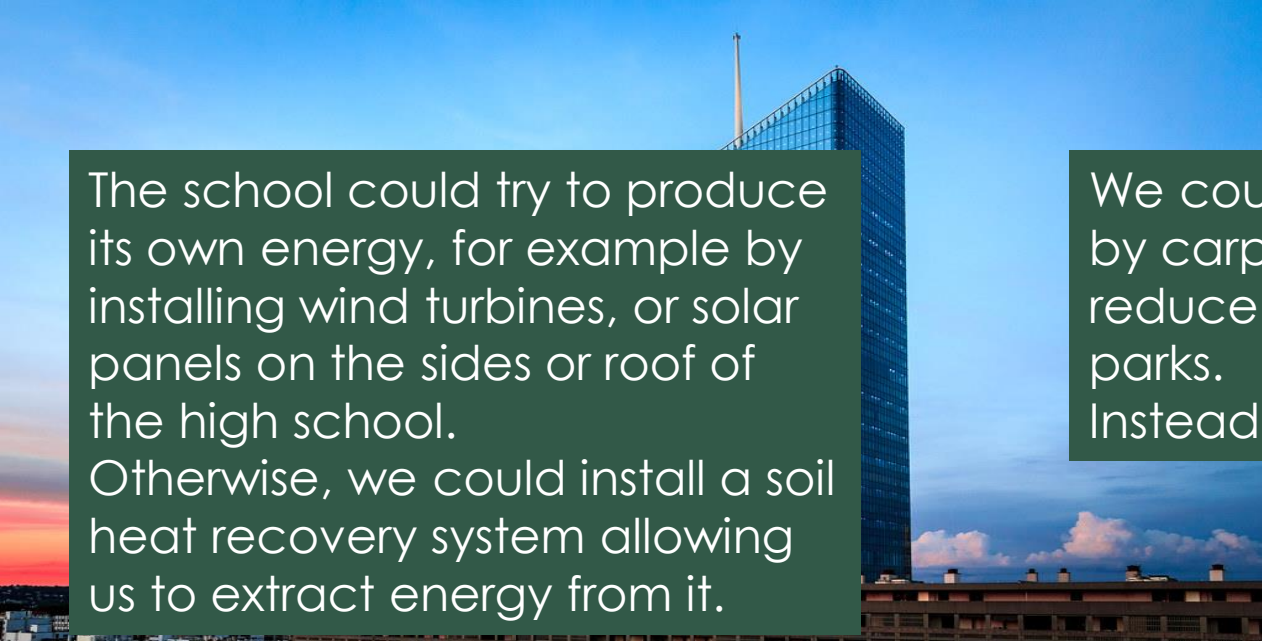

We could also leave our cars in the garage to pollute less and move on foot or by bike which would be useful to less pollute

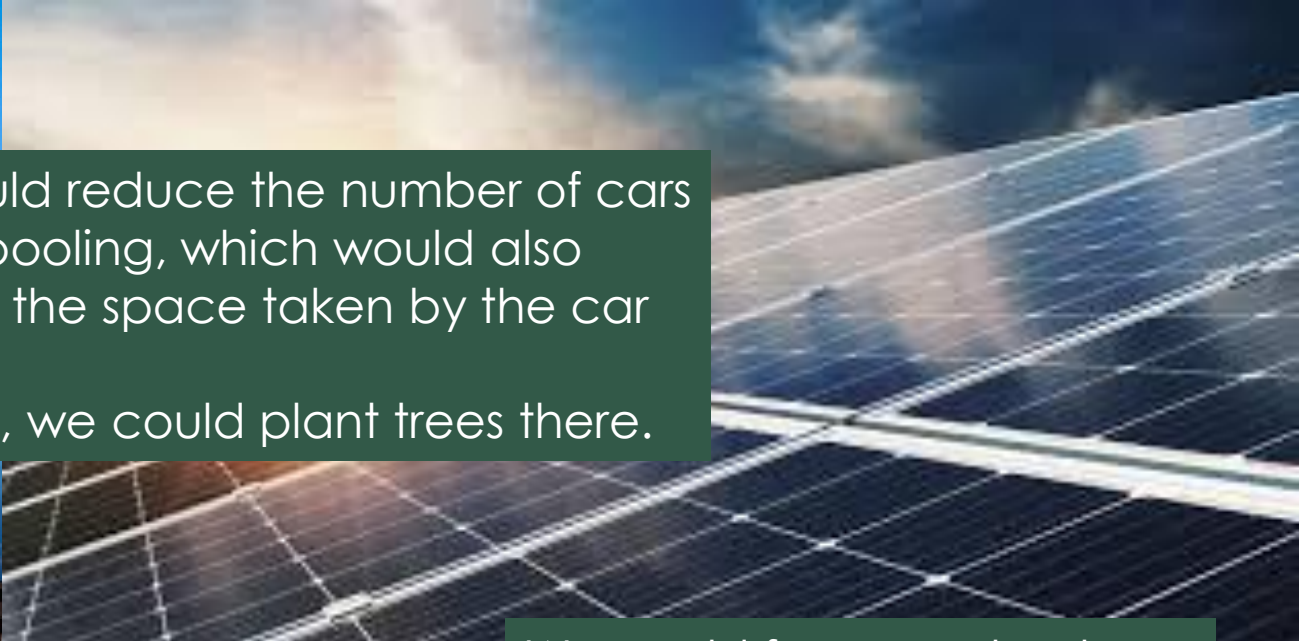

Buying second-hand items helps to limit pollution, as it reduces the amount of energy spent on manufacturing new items, which results in less pollution.

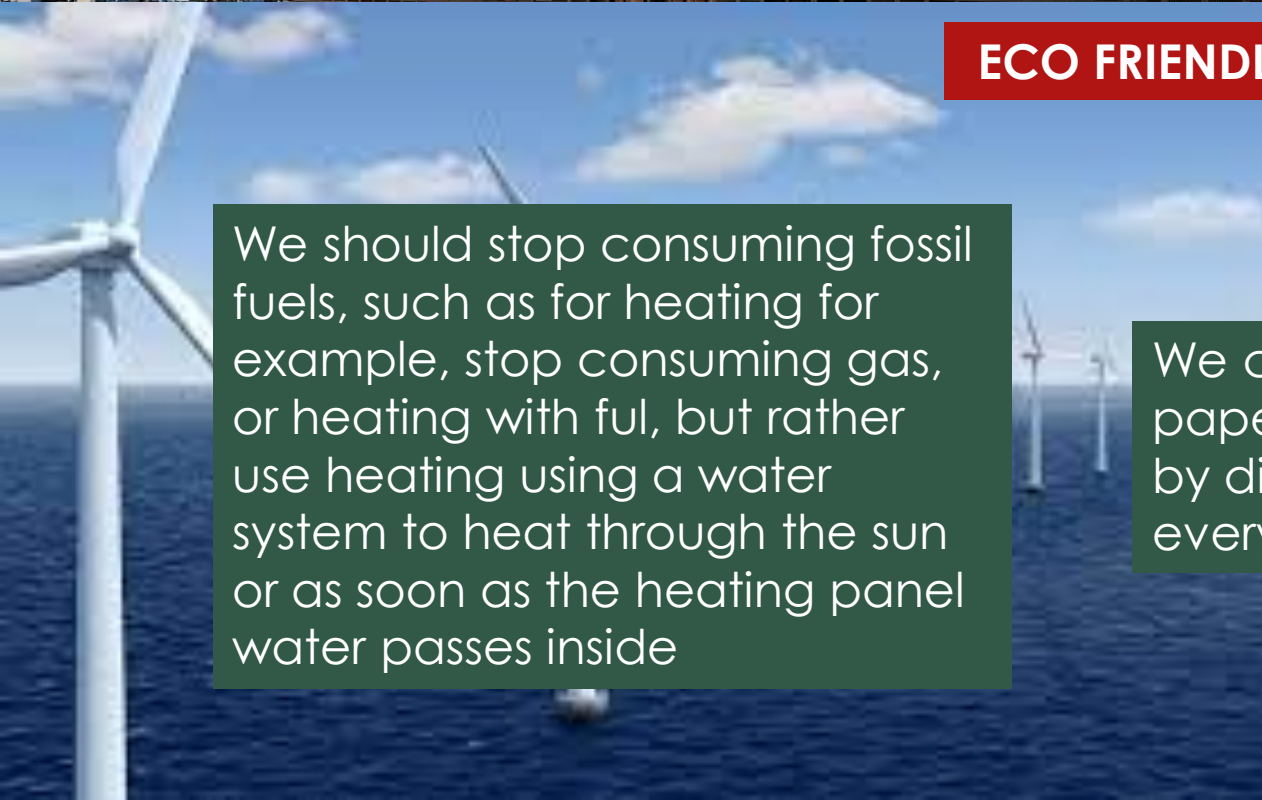

The school could try to produce its own energy, for example by installing wind turbines, or solar panels on the sides or roof of the high school. Otherwise, we could install a soil heat recovery system allowing us to extract energy from it.

We could reduce the number of cars by carpooling, which would also reduce the space taken by the car parks. Instead, we could plant trees there.

ECO FRIENDLY POSTER

We should stop consuming fossil fuels, such as for heating for example, stop consuming gas, or heating with fuel, but rather use heating using a water system to heat through the sun or as soon as the heating panel water passes inside

We could reduce our paper consumption, by digitising everything possible

We could favour natural lighting by installing many more windows, allowing us to use less artificial lighting and therefore save even more energy

ECO-FRIENDLY MATERIALS

Wood, cork, glass, bamboo, burlap or hemp ... let's choose alternative materials, more resistant to last longer and good for the environment.

For plastic fanatics, we are not gourds and we allow ourselves as long as it is not for single use!
